

P/ VOT PROJECT

The Human Layer of AI. Building the infrastructure bridging AI displacement, inclusion and workforce readiness.

SINGAPORE ANCHOR • ASIA PACIFIC FOOTPRINT

findyourpivot.org

WHO WE ARE

A connector, amplifier, and catalyst

We help people — particularly early career and women — bridge back into work in the AI era, while ensuring AI itself is built responsibly: human-centred, inclusive by design, and grounded in evidence.

FOUNDER

Annie

30+ years in technology and inclusion across Asia Pacific. Former Microsoft Director. Founder of Code Without Barriers, which upskilled 600,000+ women learners in AI across 12 countries.

WHO WE SERVE

- Students
- Teachers
- Women returning to work
- Senior professionals
- Neurodiverse talent

THE PROBLEM

Training exists. Jobs exist. The connection doesn't.

AI is reshaping work faster than most systems can respond — and the gap isn't a lack of courses. It's direction, evidence, and a structured path from learning to a real role.

51%

of workers don't know what skills to learn next

BCG / Jobstreet, 2024

53%

are willing to reskill, but lack a structured path

BCG / Jobstreet, 2024

36%

skill disruption rate across SG industries

WEF Future of Jobs 2025

The PIVOT Framework

Five stages. One structured journey from direction to a real role.

P**PROBE**

Self-assessment and coaching. Find direction before the skills.

I**ILLUMINATE**

Map real strengths to real, in-demand roles.

V**VAULT**

AI fluency skilling — from knowing to doing.

O**OWN**

Apply it. A live AI fellowship on a real business need.

T**TRANSFORM**

The move — into freelance, apprenticeship, or employment.

WHAT MAKES US DIFFERENT

We don't just train. We close the loop.

1 A methodology, not just content

The PIVOT framework is structured IP — direction first, skilling second, applied work third.

2 A system, not a pipeline

We connect government, employers, training partners, and community networks around one journey.

3 Evidence into policy

Cohort data feeds back into government policy roundtables — what we learn shapes the system, not just the individual.

WHERE WE WORK

A Singapore anchor. An Asia Pacific footprint.

Live cohorts currently running across:

Singapore

Malaysia

Philippines

New Zealand

WHY THIS MATTERS

Diverse builders make better AI.

That's the engineering case for inclusion.

Homogeneous teams build biased AI. The audiences most often left out of the AI economy — women, senior professionals, neurodiverse talent — are also the people whose judgment and lived experience make AI systems work in the real world.

A diverse, pivoted workforce doesn't just fill roles — it compounds into stronger AI, broader labour participation, and more resilient national systems.

Let's build pathways together.

Whether you're a funder, an employer, a delivery partner, or simply curious — we'd like to hear from you.
